FAQ’s – Security Officers in GAT

Getting Started · https://gatlabs.com/knowledge/tech-tips/faqs-security-officers-in-gat/

What is a Security Officer in GAT?

Security Officers are **users of the domain** who can **approve or deny** any requests **from any Admin or Delegated Auditor** in GAT+ and GAT Flow.

A Security Officer does not necessarily need to be a Google Super Admin or a Delegated Auditor. They can also be a regular user in your domain.

How can I add a Security Officer?

To add a Security Officer you must have a paid licence that includes GAT Unlock and/or GAT Flow

Security Officers can be added, edited, and removed only by GAT+ staff.

For easier management, it is recommended to have at least two Security Officers in the domain.

Check out this document to better understand the enablement process.

Can I test GAT Unlock and/or GAT Flow?

Yes, you can run a trial on a test domain. Otherwise, you'd need a paid licence with a plan that includes these products.

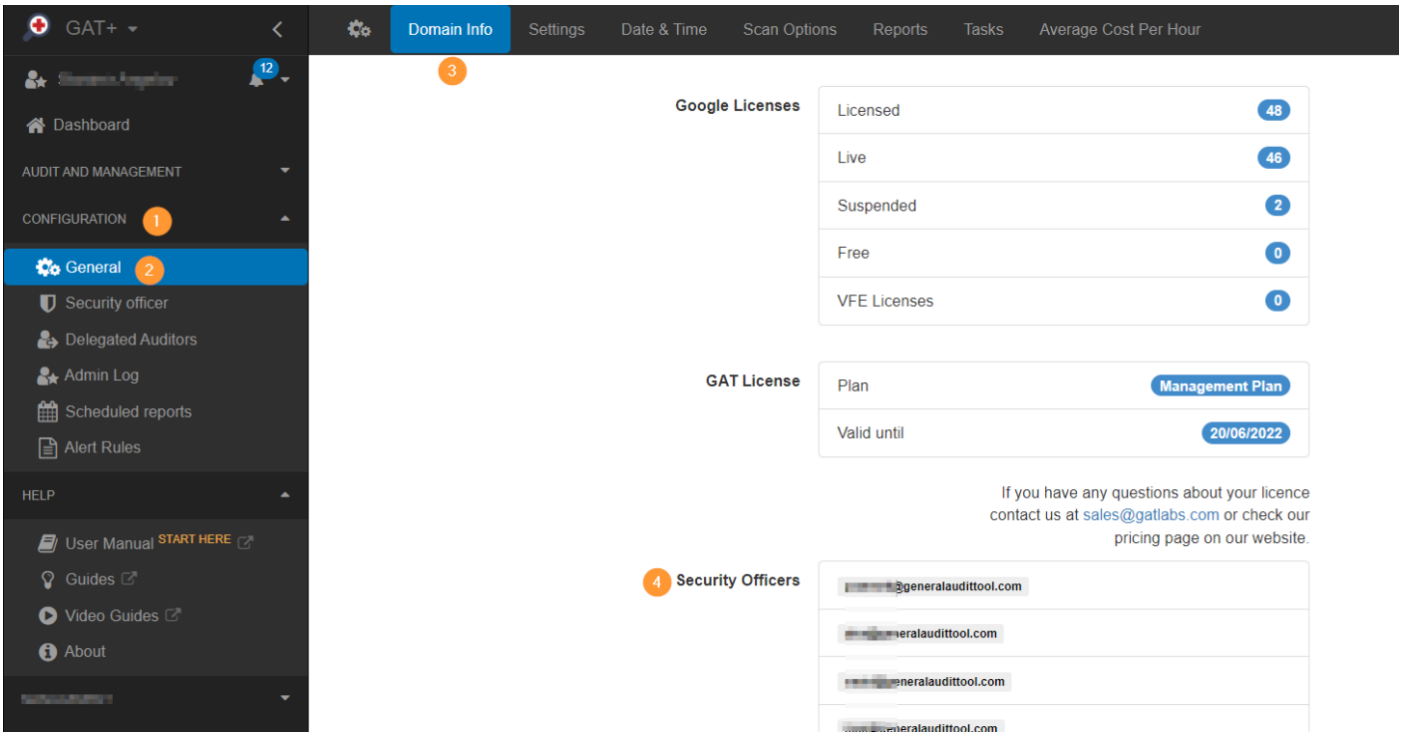
Check out our pricing plans for Enterprise and Education.

Please contact sales@gatlabs.com for more information.

How can I check my Security Officers' list?

In GAT+ you can **check who are the users who are set up as Security Officers.**

Navigate to **GAT+ > Configuration > General > Domain info > Security officers**



How can I update my Security Officers?

Security Officers can be added, edited, and removed only by GAT+ staff.

To make updates to the current list, an existing Security Officer in your domain or the Approver (Senior Manager) can contact us at unlock@generalaudittool.com. We'll gladly take care of your request from there.

What happens if my Security Officers or Approver left the organisation?

Please contact us at unlock@generalaudittool.com. We'll need to run the approval process again then.

Check out this document to better understand the enablement process.
