Alert when 2FA is disabled for any user in your google domain with GAT+

DLP (Data Loss Prevention) · https://gatlabs.com/knowledge/tech-tips/alert-when-2fa-is-disabled-for-any-user-in-your-google-domain/

Introduction

Two-factor authentication (2FA) is a form of authentication that requires only two authentication factors. The first factor is your username and password and the second factor is another method that you choose.

GAT+ Alert Rules functionality can be configured by a Google Workspace Super Admin when these alerts are triggered by end-users the recipients of the rule get notified.

There are multiple types of Alert options:

- Applications
- Emails
- Drive
- YouTube
- Mobile Devices
- Users
- Users Security
- User Logins

Users Alert

For Users, you can set up different alerts and be notified of different actions.

- Notify on **Two-Factor Authentication (2FA**) backup codes used
- **Notify on 2FA disabled**
- Notify when an account has not been used for a period of time

- Notify when an account is used again after x days of inactivity
- Notify when storage exceeded

Configure Users Alert Rule

Navigate to **GAT+ → Configuration → Alert Rules**

[2FA]

Click on the "+ sign" and a new window will be displayed, fill in the details.

[2FA]

- Name - enter the name of the Alert.
- Enabled - checkmark to enable or disable the Alert.
- Type - **Users**.
- Scope - select what users for which alert will be triggered.
- Recipients - Add a user email or group email for Email notifications, or leave as blank (this will show alerts only in the alerts section).
- Select - **Notify on 2FA disabled.**
- Click on the **Save** button to save the rule.

Result

The rule can be viewed, edited, or removed in **Alert rules**

[Two-Factor Authentication (2FA)]

When the Alert is triggered they will be generated and displayed in **Audit & Management → Alerts**
