Google Drive User Productivity Measured

Drive Audit & Management · https://gatlabs.com/knowledge/tech-tips/google-drive-user-productivity-measured/

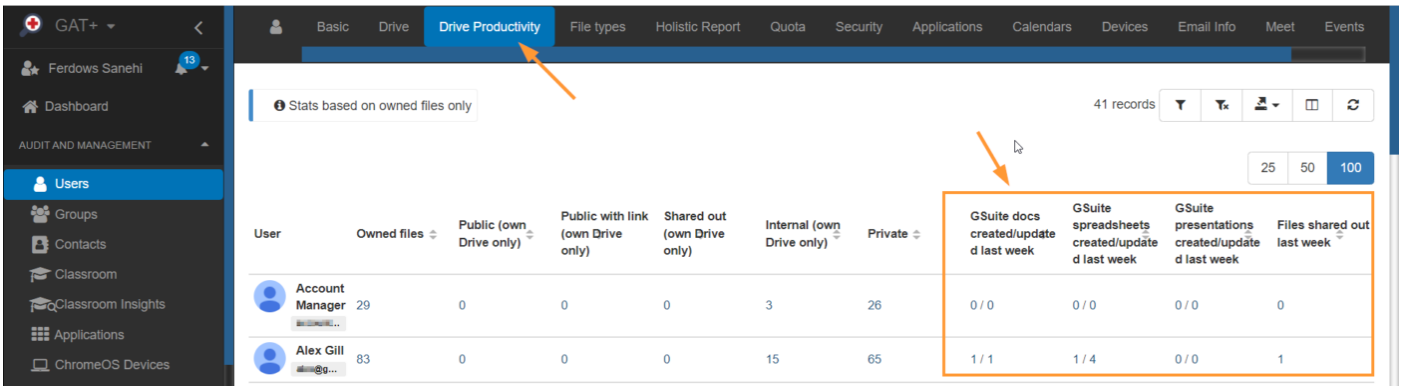
GAT+ provides an extensive and detailed view of the entire domain Drive files. There are many reports that can be generated based on the user activity in Drive.

In GAT+ we can quickly check the Drive productivity of all the users.

Navigate to **GAT+ > User > Drive Productivity**

On the right side filter by:

- **G Suite docs created/updated last week**
- **G Suite spreadsheets created/updated last week**
- **G Suite presentations created/updated last week**



The Drive Productivity tab will show data for each individual user in the domain. All this information is available just by selecting the **Drive productivity** tab.

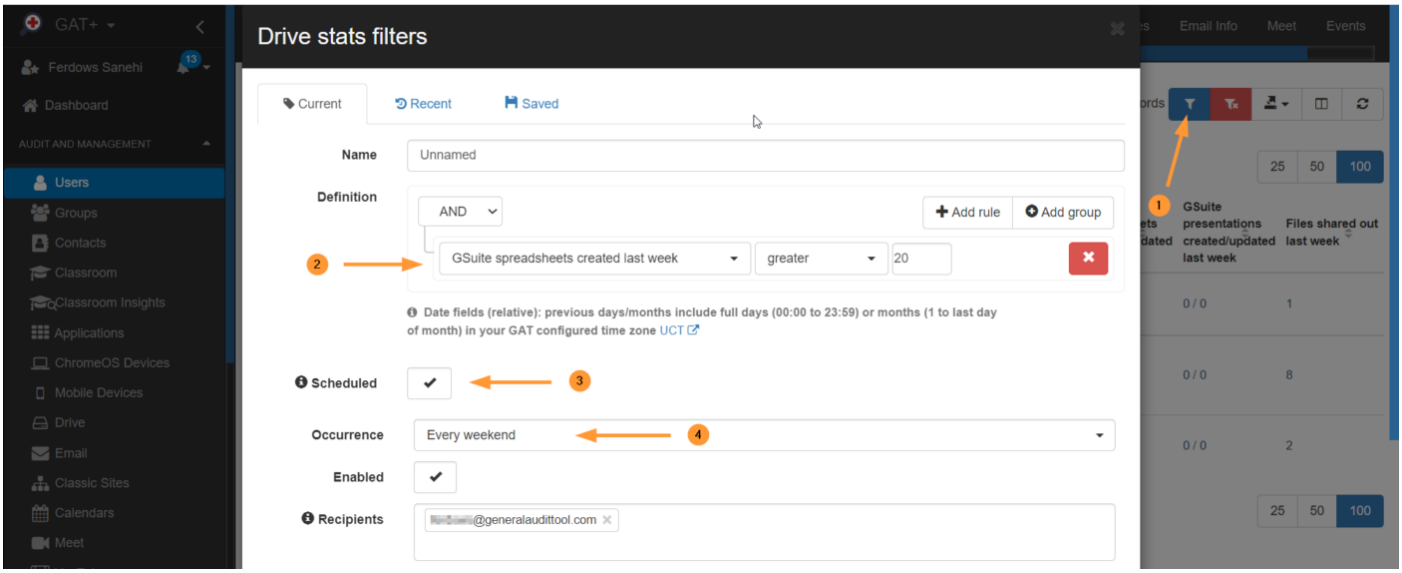
It shows all files **owned** by the user:

- Number of Public,
- Public with a link,
- Shared out,
- Internal,
- Private,
- Google Workspace docs/spreadsheets/presentations

The user can apply different filters on the top and gather different information and even schedule a report on the activities of the users for a certain period of time.

For example:

- Schedule a report for all users who created Google Workspace spreadsheets greater than 20 and generate a report every weekend.



The report can be scheduled for any other search parameters you use, in the above example, we use **Google Spreadsheets create/updated last week.**

You can use **Google docs created/updated last week** and any other options available.

The general purpose of scheduling reports is to show user engagement with an overall Google Drive environment.
