Remove User Profile Photos

GAT Flow allows admins to remove user profile photos.

This can be done for one user individually or for multiple users in bulk.

The user profile photos will be visible in the GAT+ Users tab

[GAT Flow | Remove User Profile Photos 1]

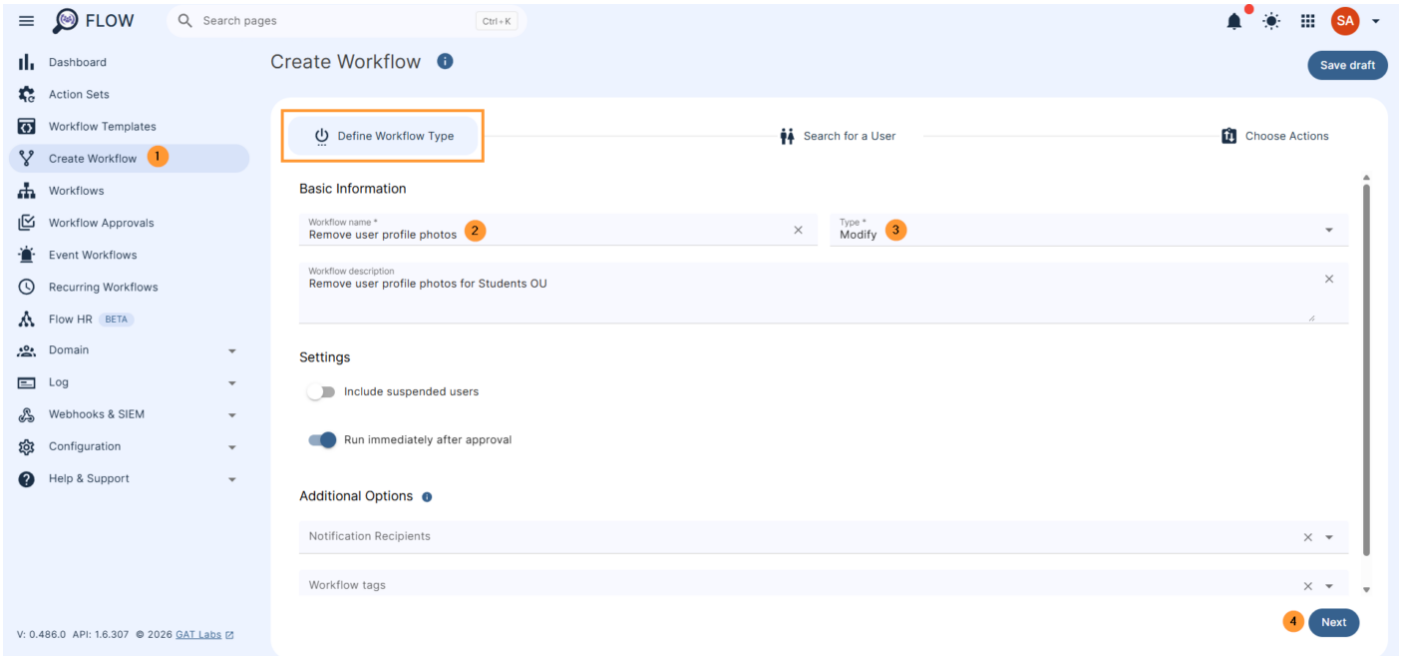
The steps required to remove those photos are as follows.

Flow action

Navigate to GAT Flow and create a workflow for this action.

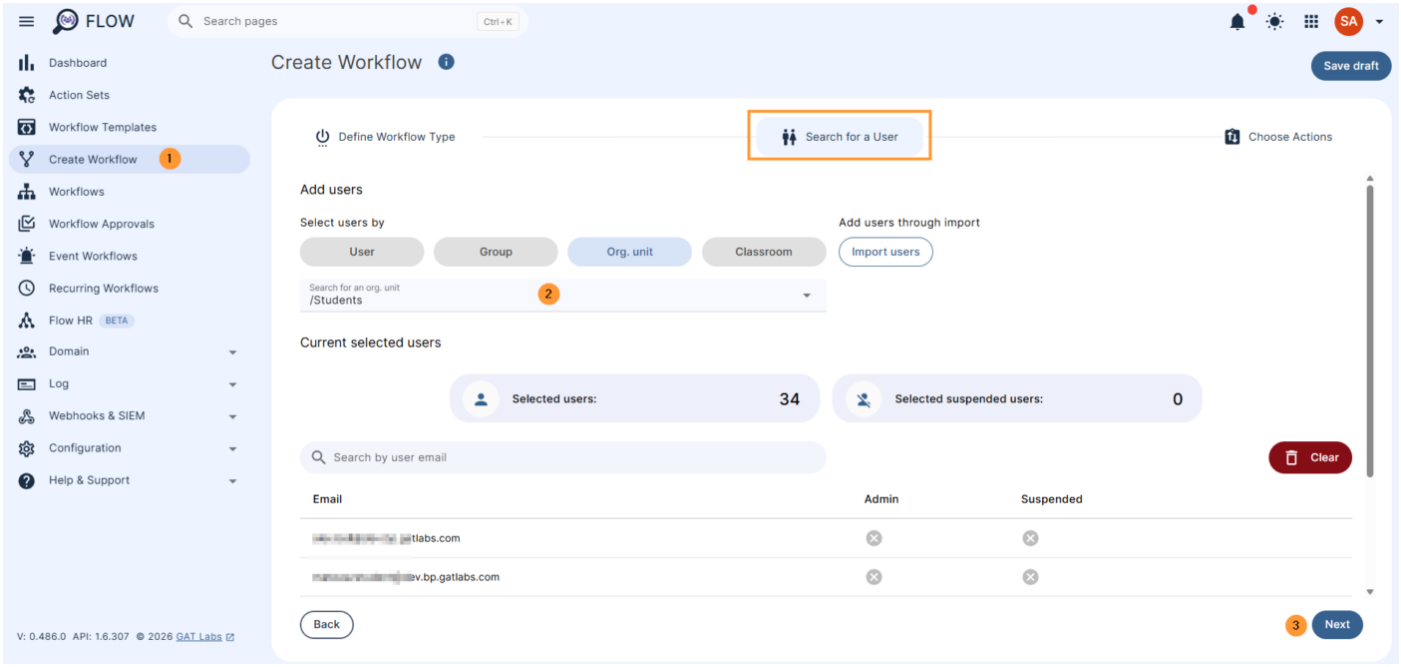
In the Define workflow type, fill in the required info

- Name - enter the name for the workflow
- Type - select the type of workflow to run (modify to update users)



Click on **Next**

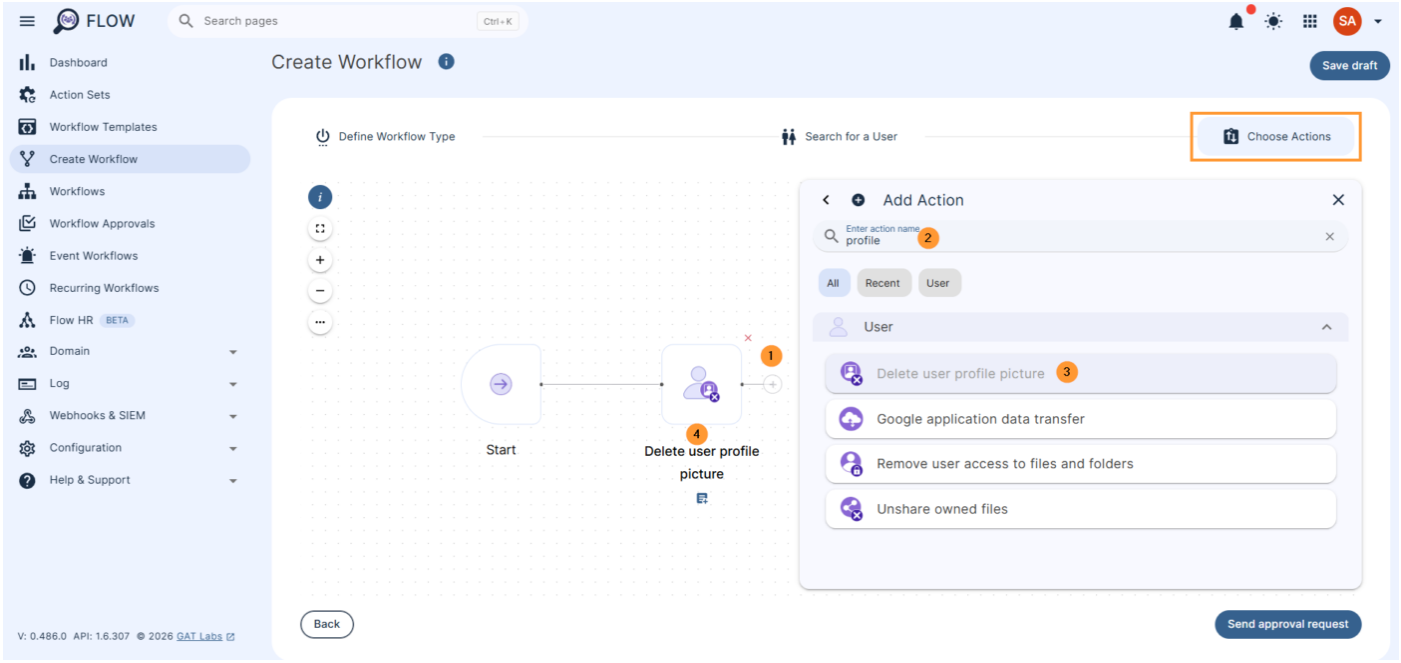
In "**Search for a user,**" add the users you need (add one by one, via group or org. unit)



When users are selected, click on the **Next** button

In **Choose actions,** find and use the option under **Users > Delete user profile picture**

Click on the + to Add Action > search for "Delete user profile picture" and select it.



Double-click on it to open. In this case, it will show what the action will do.

This action will remove the user's profile picture.

When ready, click on **Send approval request** to proceed.

Security Officer

This will send an Email to the Security officer for approval.

When **approved,** the action will take effect.

The result can be checked under **Flow > Workflow Approvals**

Result

As a result of the action, the **Profile pictures will be removed** from the selected users.

By utilizing GAT Flow, administrators can efficiently manage domain appearance and privacy by removing individual or bulk user profile photos in just a few steps.

Because this action requires Security Officer approval, it ensures that changes remain secure, audited, and compliant with organization policies.
