Delete 2-step verification backup codes

On-boarding, Off-boarding & Modifying · https://gatlabs.com/knowledge/tech-tips/delete-2-step-verification-backup-codes/

Delete 2-step verification backup codes

GAT Flow is a User management tool part of the GAT Suite of products. It allows Google Workspace Admins to Onboard**,** Offboard, and Modify users of the domain.

It allows taking bulk action on multiple users at the same time.

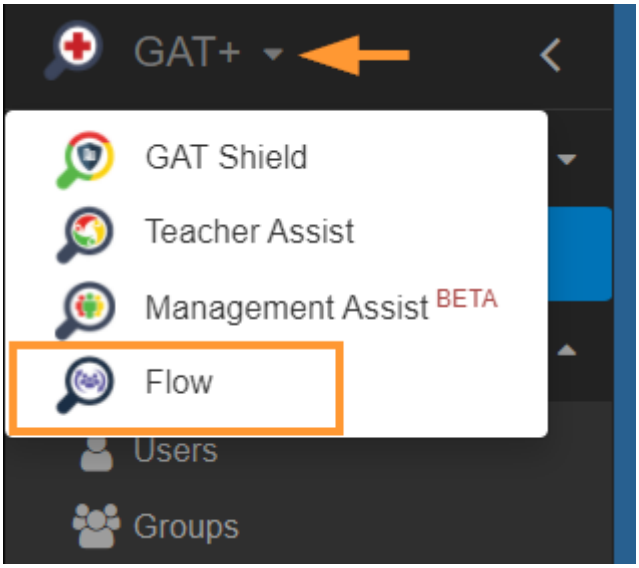

Delete 2-step verification backup codes is one of the actions that can be taken using Flow.

> **Note:** To use verification backup codes users must have 2-Step Verification turned on.

This action can be applied in **Offboarding** and **Modifying** workflows including Event and Recurring workflows

Set up Flow

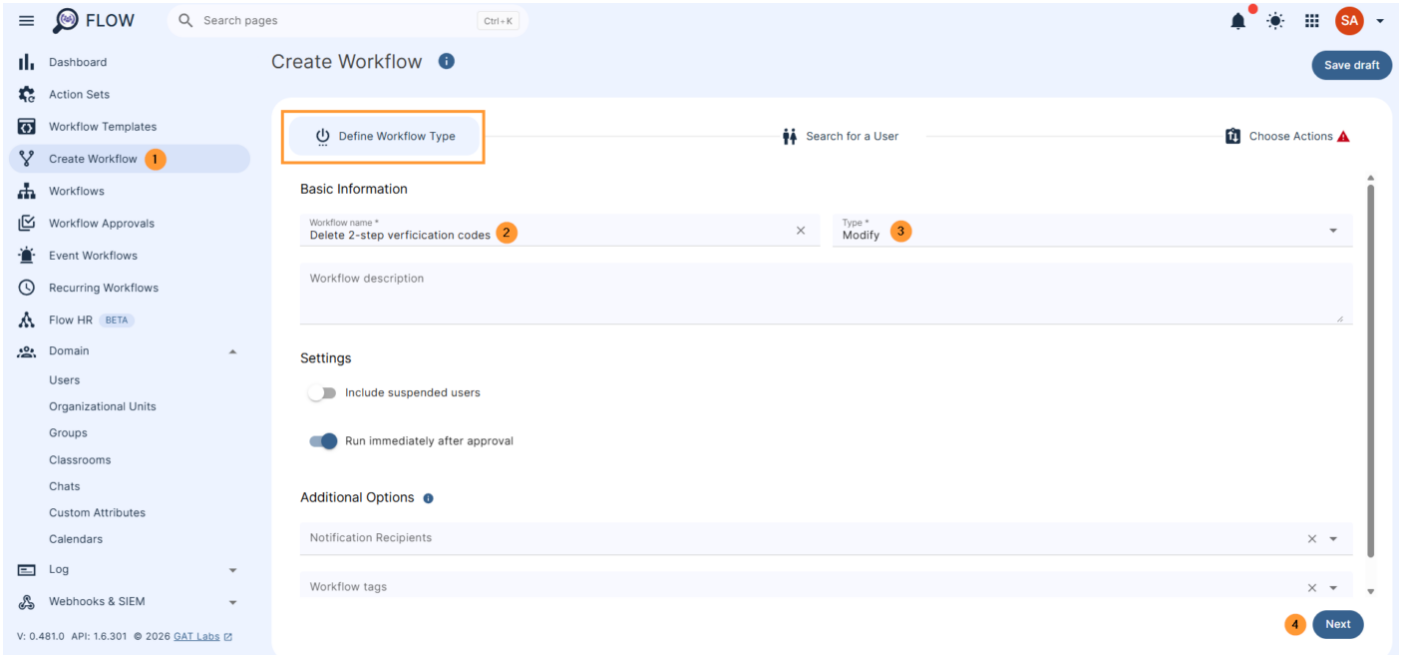

Navigate to **GAT Flow**

In Flow, click on the **Create workflow** button from the menu on the left.

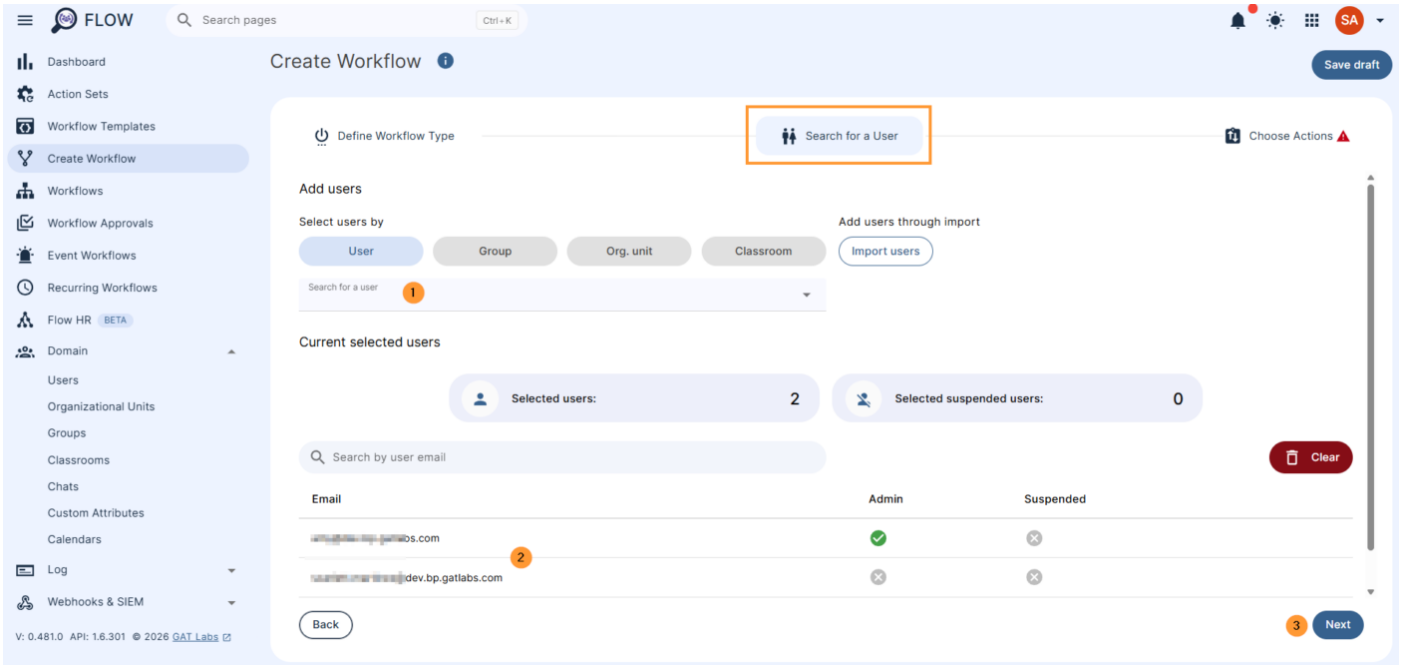

In the Define Workflow type, fill in the details

- Enter the **Workflow name**
- Select the workflow **type** – **Modify** or Offboarding
- Click on the **Next** button to proceed

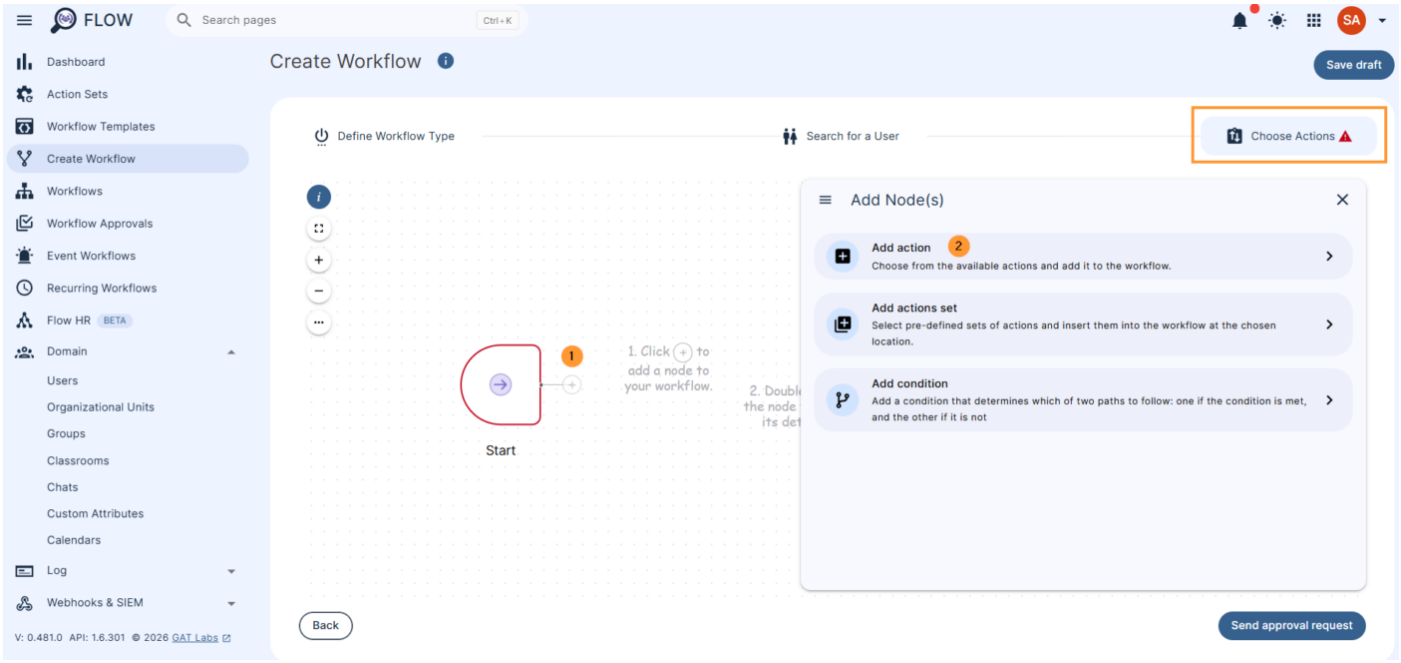

In **Search for a user**

- Enter the users needed by adding
  - User
  - Group of users
  - Org. Unit of users
  - Import users
- Click on the **Next** button to proceed

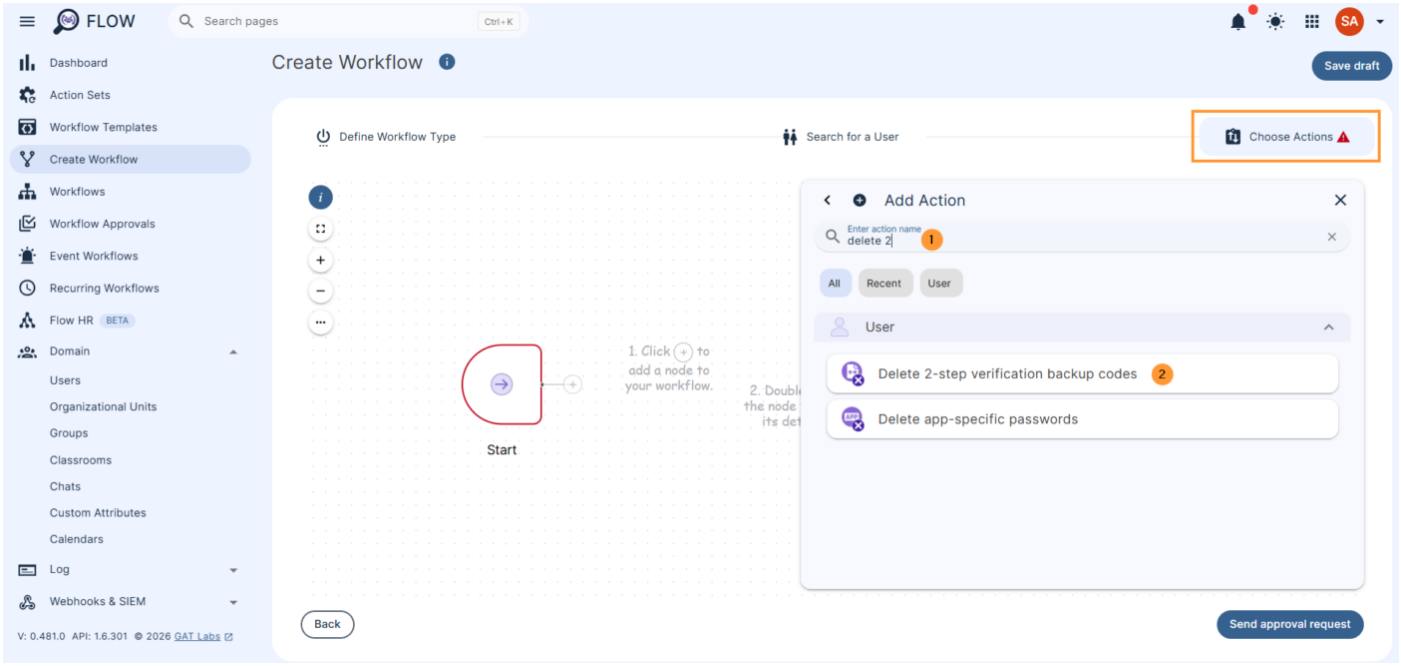

In **Choose actions**

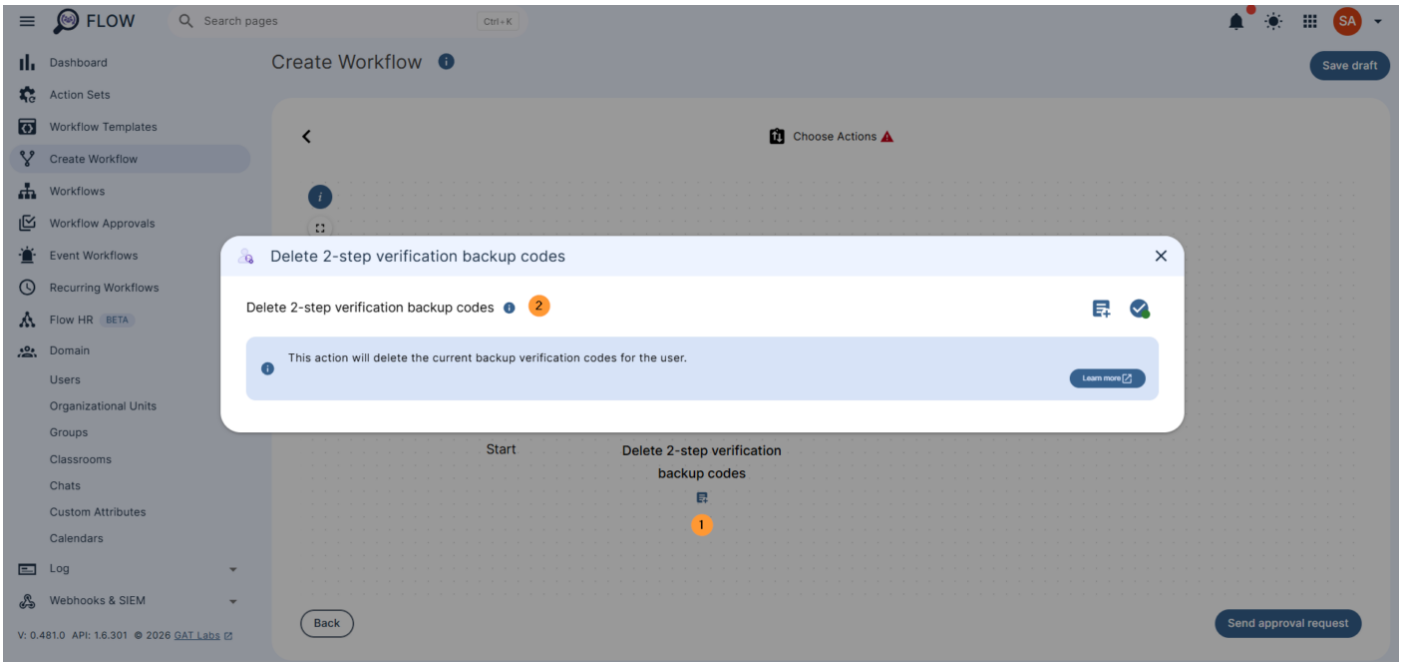

In Choose actions, click on the + button and add Action, Action set, or Condition

In Add action, search for and add the action "**Delete 2-step verification backup codes.**"

Once the action is selected, **double-click** it to open and view the details of the action to be taken.

Security officer approval

When the action is selected, click on **Send approval request**

The security officer will receive an email for approval unless pre-approval is used. 2223

Result
