GAT Filters multiple value input

Drive Audit & Management · https://gatlabs.com/knowledge/tech-tips/gat-filters-multiple-value-input/

We have added a feature that allows Admins/Auditors to paste in as many values as needed into an audit filter throughout the tool.

Navigate to a filter and specify the definition. Whether it is users/FileID's/Managers/Mimetypes/Commentors etc you are now able to add multiple inputs for these conditions using the **'in (comma separated values)'** operator.

In the example below we are trying to audit a number of FileID's.

Result

The result will populate according to the filter specifications. This feature is intended to make auditing simpler where auditors can copy-paste from spreadsheets and take bulk action on specific uses.
