Google Meet Activity Report for Any Given Day in GAT+

Google Meet · https://gatlabs.com/knowledge/tech-tips/google-meet-activity-report-for-any-given-day-in-gat/

GAT+ allows a Google Workspace Admin to generate a Meet Activity Report, auditing all Google Meet activities that have occurred on their domain.

You can audit and analyze this in the Meet Activity section of GAT+

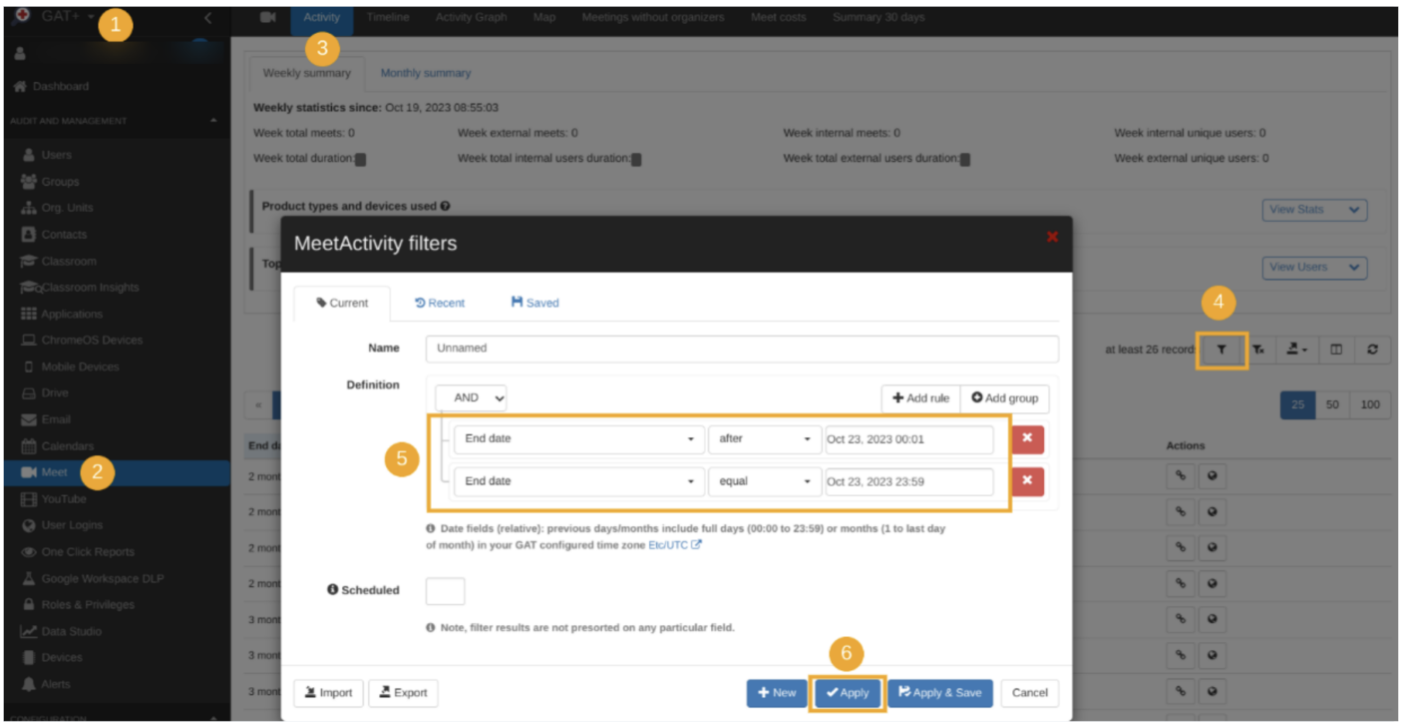

Meet Activity filter

In case you need to analyze a particular date of the year for a Meet Activity Report, navigate to GAT+ (1) > Meet (2) > Activity section (3) and apply a filtering option (4) to find specific results.

Apply the filter below (5) to find the Meet calls that occurred on a specific day of the year:

- End date > after > xx.yy.zzzz (date) 00:01 (time), AND
- End date > before > xx.yy.zzzz (date) 23:59 (time)

When all is ready, click Apply (6) to allow GAT+ to return the appropriate results.

NOTE: There is no ‘start date’ reported in the Meet Activity Report as GAT+ captures the records of each Meet only when the call has ended (the call is disconnected). Only then does GAT+ create a record of this action, and it can show additional information.
