Monitor blocked or allowed URL’s during class with Teacher Assist’s Site Control History

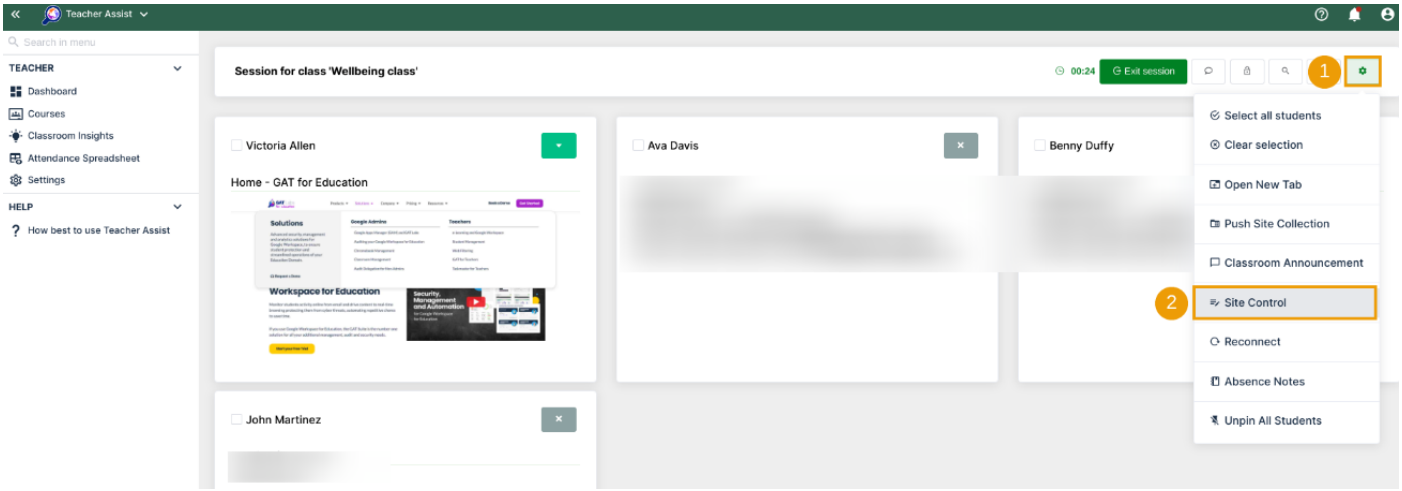

Classroom Audit & Management · https://gatlabs.com/knowledge/tech-tips/monitor-blocked-or-allowed-urls-during-class-with-teacher-assists-site-control-history/

As an educator, ensuring compliance with digital rules and URL policies during class is essential. **Teacher Assist's Site Access Control History** feature provides a simple yet powerful way to monitor and review website access during your sessions.

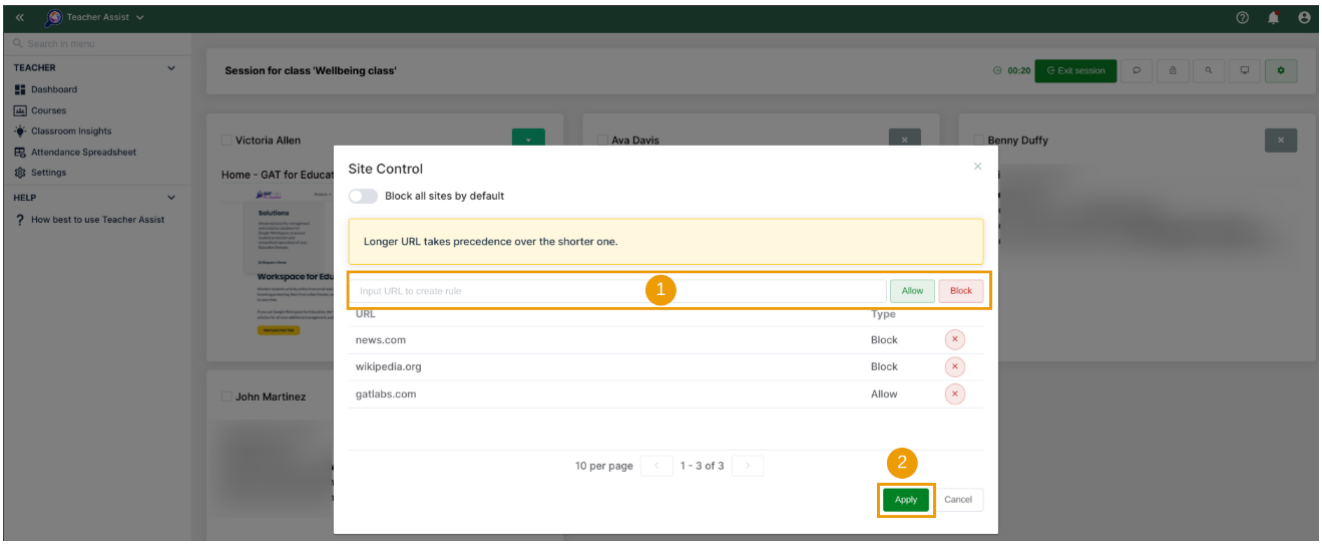

This feature helps to determine if any teachers in the class were not breaking school/organizational rules or policies.

When the teacher adds or removes a URL rule in the Site Control section of Teacher Assist during the session (allow or block rule), these historical logs are displayed in the **Site Access Control History** section and **kept for 30 days**.

When the session is running, the teacher can apply the rule directly through the **Site Control** option **(2)** found under **Session tools (1)**:

Required URL can be added and Allowed OR Blocked by the teacher (1-2):

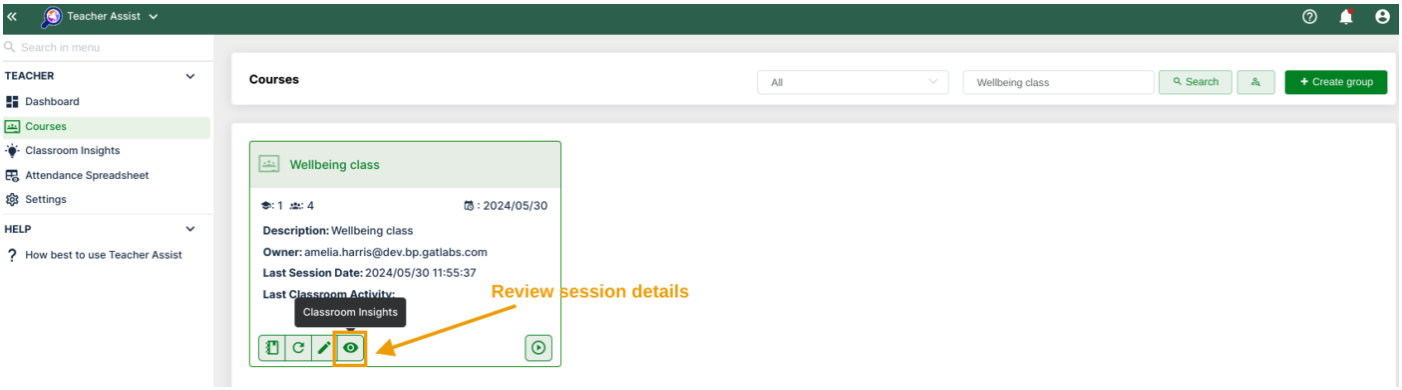

The historical log of those rules applied during the session is presented in **Classroom Insights**.

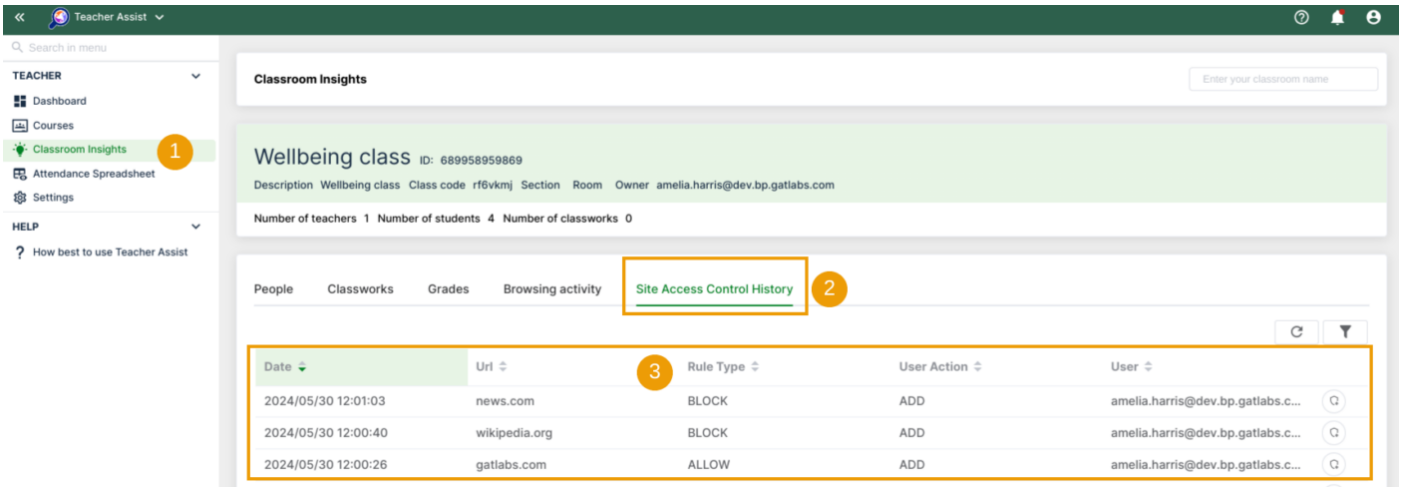

Site Access Control History access via the Course card

Once the session is over, the teacher or educational administrator can review those rules that are presented under the **Site Access Control History** tab.

To do so, the tutor of the class or administrator of the educational domain can navigate to the Classroom Insights section by clicking the adequate button on the Classroom card:

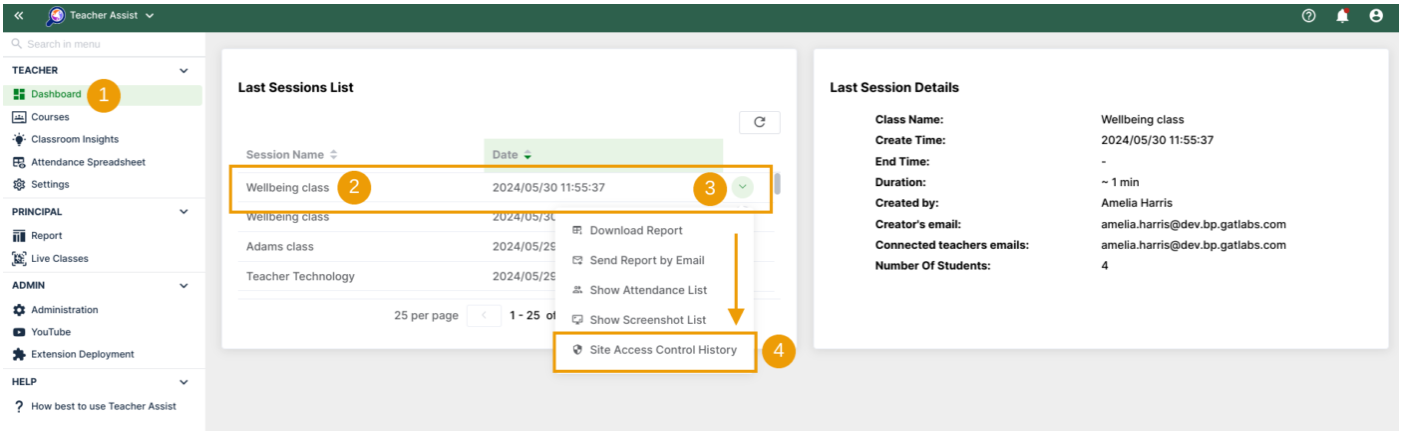

The tab redirects to the **Classroom Insights (1)** section of Teacher Assist. To review the history of the rules applied during the classroom, navigate to the **Site Access Control History** tab **(2)** to see all the rules applied **(3)**:

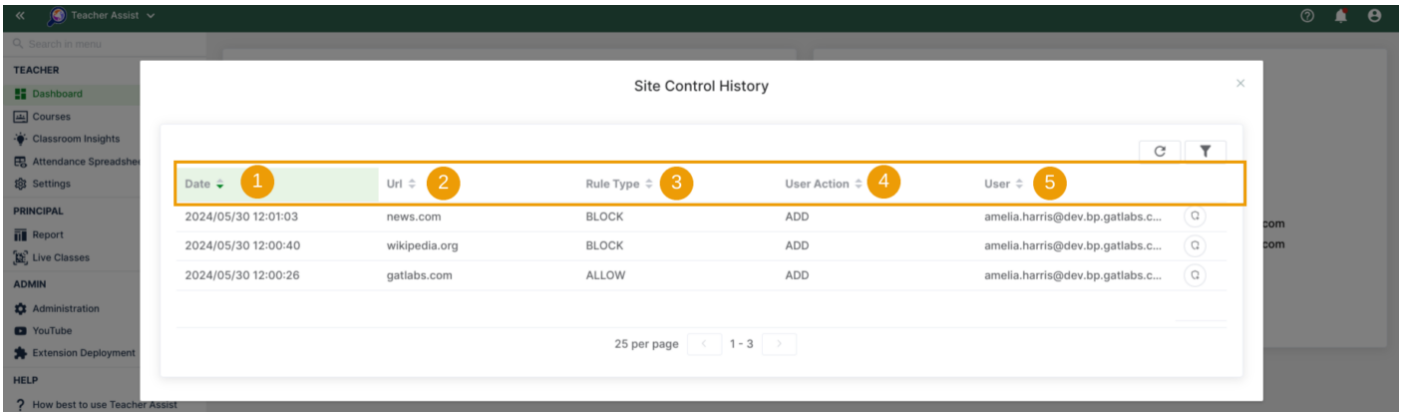

Site Access Control History access via the Dashboard

To view the **Site Access Control History** logs, navigate to **Dashboard >** find the particular class in the **Last Session List section (2)** > click on the arrow down to display the menu (3) **>** select the very last option **Site Access Control History (4)**

Site Access Control History logs allow review of the following columns:

1. **Date** – The date and time when the change was triggered;
2. **URL** – The Sites in question;
3. **Rule Type** – Allow or Block;
4. **User Actions** – Determine whether the site was removed or added;
5. **User** – Shows the account that triggered the change
