Take a Screenshot of a Student’s Current Browsing Activity During a Class via Teacher Assist

Classroom Audit & Management · https://gatlabs.com/knowledge/tech-tips/take-a-screenshot-of-a-students-current-browsing-activity-during-a-class-with-teacher-assist/

Teacher Assist helps the teachers using Google Workspace for Education classrooms to manage the sessions accordingly. If needed, the teacher who runs the session can take a screenshot of a student's current browsing activity. The screenshot is being saved in Teacher Assist under the name of the classroom in question in the **Dashboard** or **Session Report** for further analysis.

Step 1.

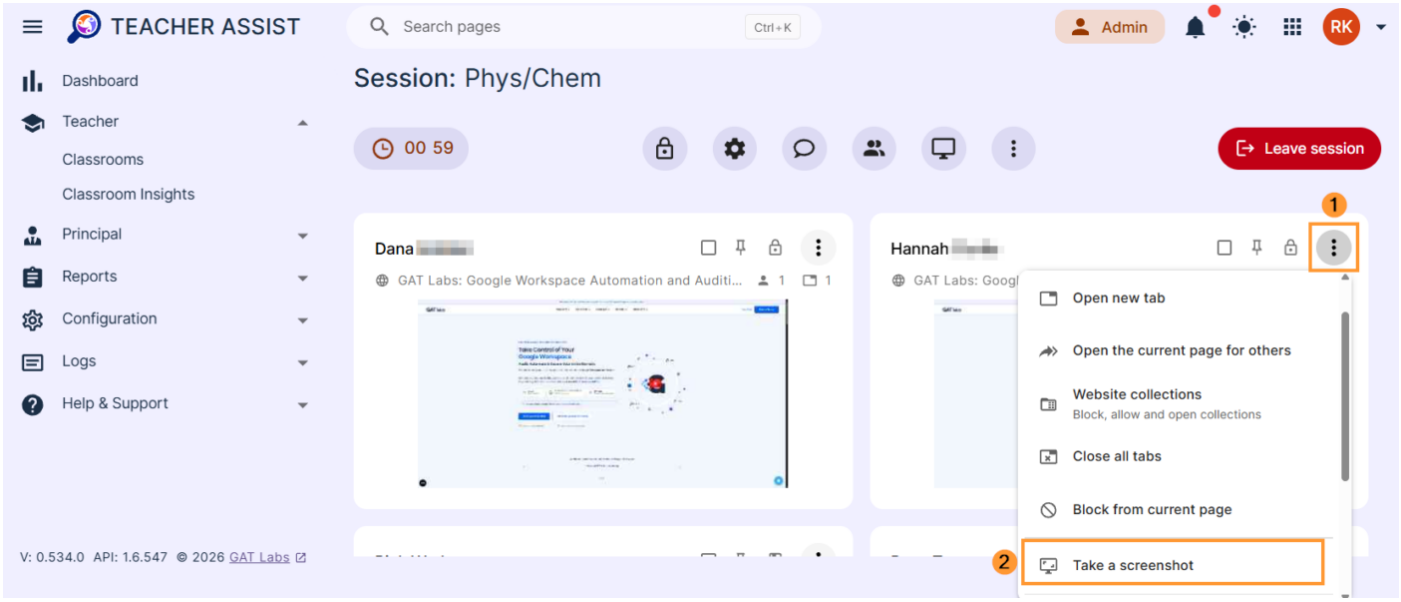

To take a screenshot of a student's current browsing activity, the teacher initiates the session by navigating to **Teacher > Classroom** (1), identify your class (2), and clicking on '**Start session**' icon displayed on the bottom right corner of the classroom card as shown below:

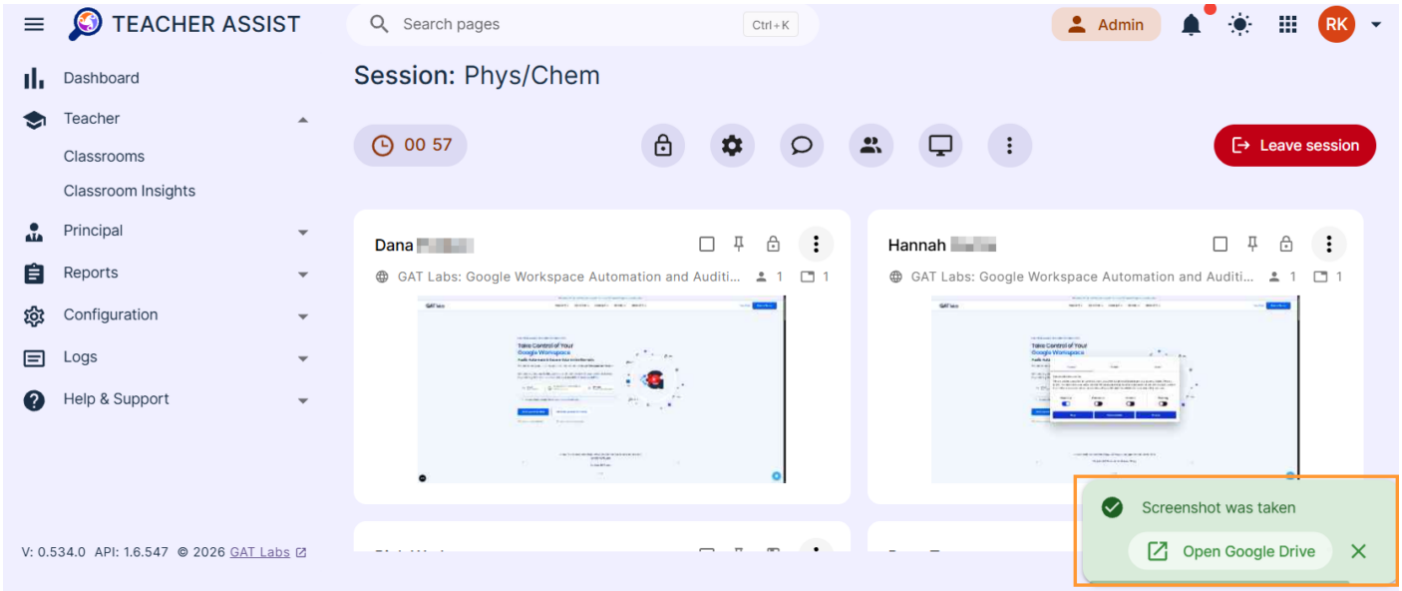

When the classroom is running, the teacher can take a screenshot of the active student's browser.

Step 2.

To be able to take a screenshot, go to the particular active user display card in the Teacher Assist app and click on the actions icon with the three dots that displays a drop-down menu and select 'Take a screenshot'.

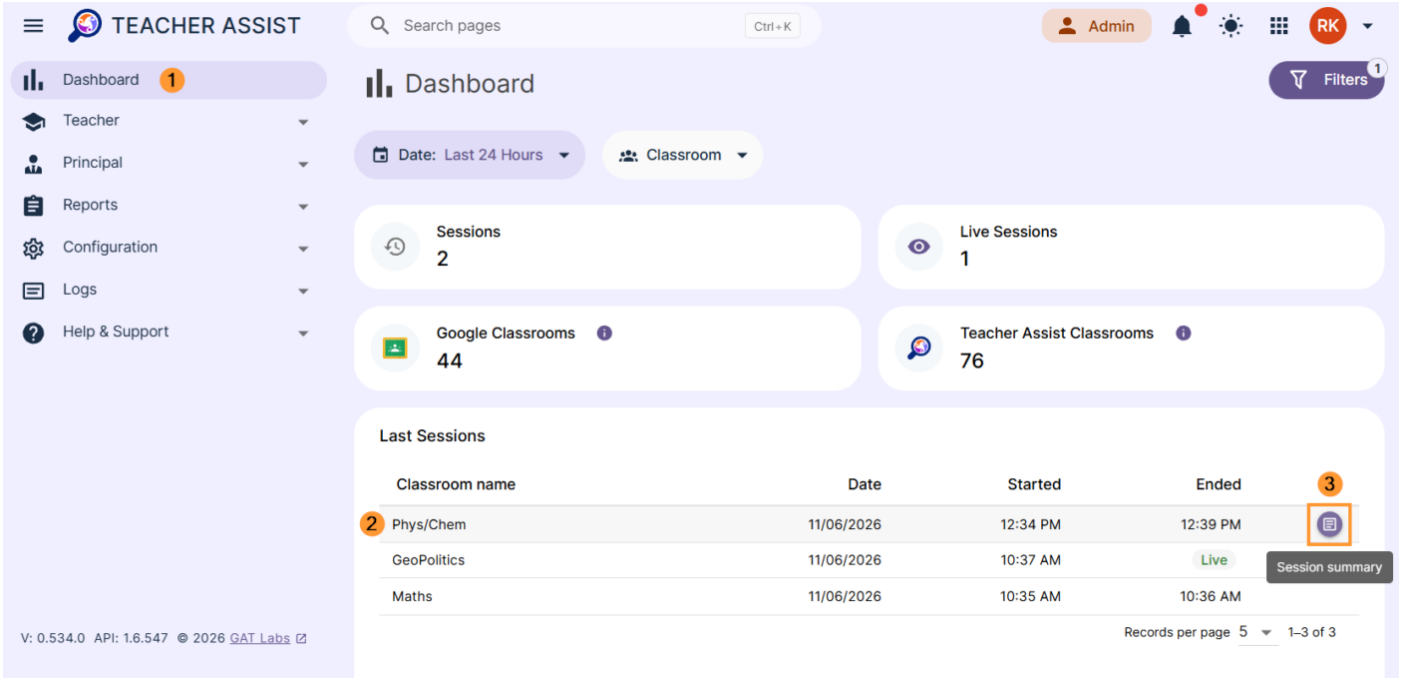

The screenshot is taken automatically. The message confirming it appears in the bottom right corner of the Teacher Assist dashboard.

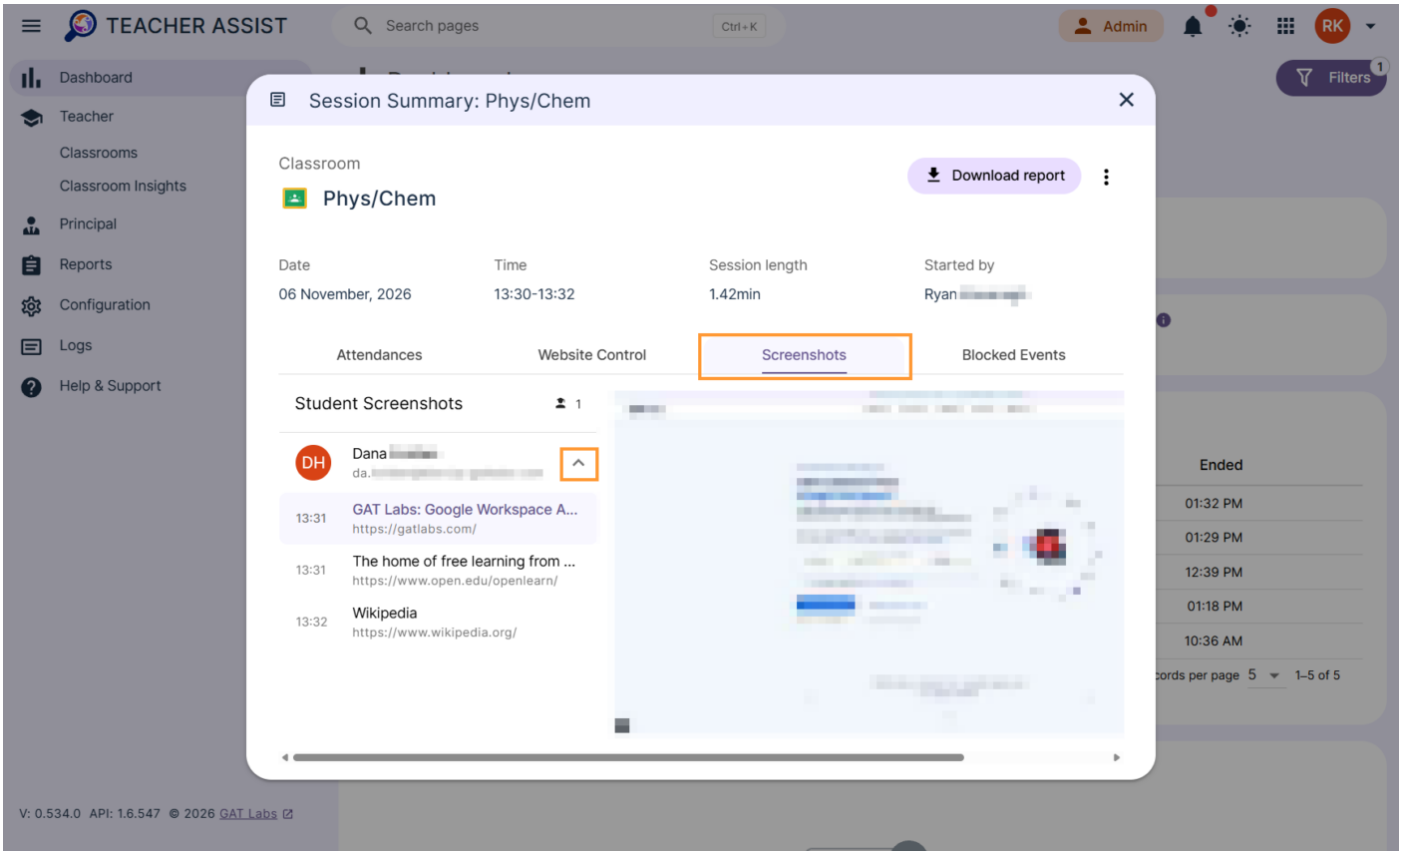

Step 3.

To review the screenshots taken during the session, navigate to the **Dashboard** (1), find the session in question (2) and select **'Session summary'** icon that appears next to the session log (3).

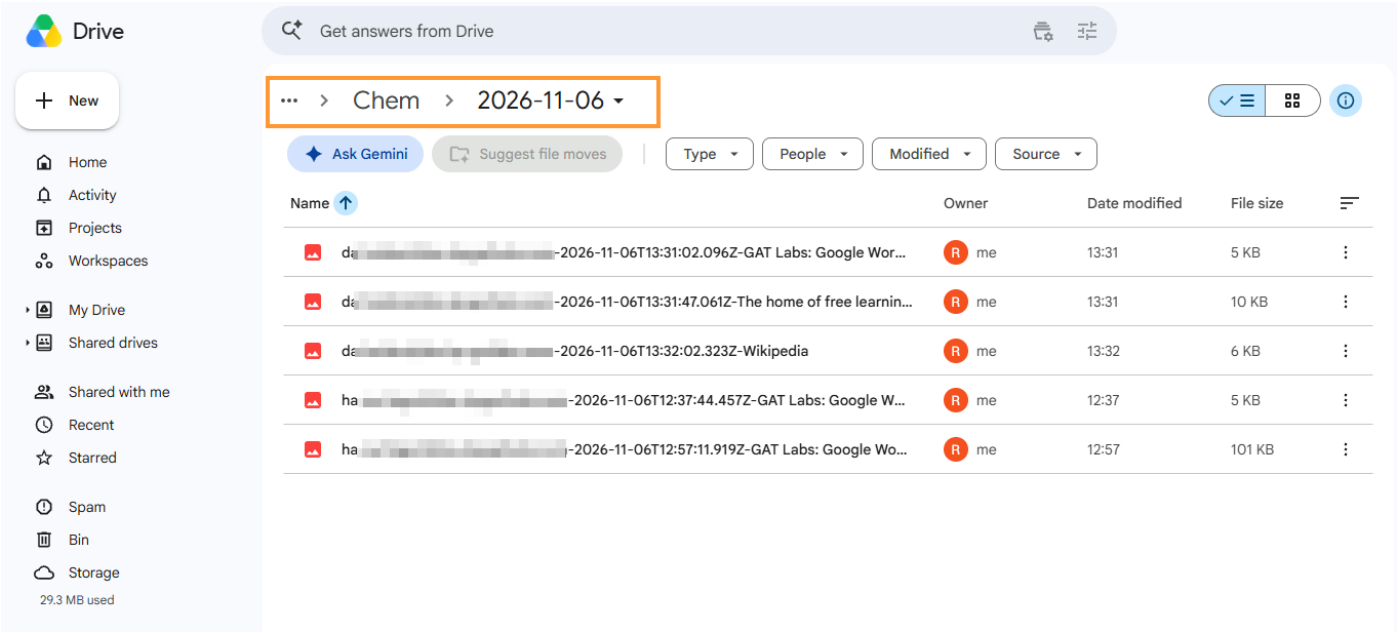

Click on the '**Screenshots**' tab and the list of all screenshots taken during this session appears.

If there are more screenshots taken during the sessions, all are displayed and can be reviewed by clicking on each of them individually.

When the screenshot is taken, it is automatically uploaded to the teachers Drive to be able to better evaluate this browsing activity and use it for further investigation.
