

GAT Labs Successfully Achieves SOC 2 Compliance

GAT Labs Ltd, the leading provider in Google Workspace auditing, security, and automation, is pleased to announce its success. We have completed the System and Organization Controls (SOC) 2 (Type II) audit.

This achievement showcases our compliance with the leading industry standards for customer data security. It also demonstrates our ongoing commitment to a secure data environment for our customers.

Developed by the American Institute of Certified Public Accountants (AICPA), a SOC 2 information security standard is a report that validates controls relevant to security, availability, integrity, confidentiality, and privacy.

The audit was completed with the help of Johanson Group LLP, a premier certification body helping organizations obtain and maintain global compliance standards.

Johanson Group confirmed GAT Labs's information security controls meet the leading industry standards for Cloud Security and Management of Google Workspace. Johanson Group specializes in SOC 2 audits and provides audit and professional services to public and private companies.

SOC 2 has a rigorous requirement on how companies handle customer data and information, so compliance guarantees there are established and implemented organizational practices in place to safeguard customer data.

At its core, GAT Labs is committed to providing identity management and mission-critical data to industries such as enterprises, non-profits, government, health care, financial services, and education. Data integrity and security are a fundamental part of how GAT Labs manages user identity. SOC 2 (Type II) compliance represents a commitment that secure systems and controls are maintained by the organization on an ongoing basis.
